

Paddle Type Flow Meter

TSK

Technical Information

- Flow measurement and monitoring of turbid, hazardous or flammable liquids
- Horizontal and vertical installation possible
- Extremely robust design
- Outstanding clear reading due to 90° arranged scale
- Transmitter with 4...20mA, HART®
- Suitability for installation in safety-related measuring circuits according to SIL

Function

If a medium flows with sufficient velocity through the vertically or horizontally arranged TSK armature (1), the paddle (2) is pivoted about its pivot point until a state of equilibrium is reached between the force of the medium flowing through and the opposing paddle surface plus the spring force. The angular or equilibrium position of the paddle serves as the measure of the flow rate. It is transmitted by the encapsulated permanent ring magnet (3),

which is located at the end of the paddle axis, to the flow rate scale (5) and to the optional electrical transducers, in a decoupling-proof and contactless manner via the coupled magnet display system (4).

The flow values displayed on the scale apply to the calibrated medium or to a medium with the same physical data.

Application

The paddle-type flow meter TSK is suitable for flow measurement of liquid fluids in pipes.

The special advantage of the meter is that it can be used for all mounting and flow directions. Furthermore, it is extremely robust and well-suited for rough environmental conditions.

The meter shows the actual flow rate in volume or mass per unit in time.

Applications:

- flow measurement
- monitoring
- adjusting
- control of liquid products

The instruments are available with additional electrical equipment for process monitoring and control.

Features:

- Large variety of material or linings in contact with the product
- Permanent magnetic resistive signal transmission
- Applicable for high process temperatures
- Gaseous fluids (optional)

Design / Variations

Aluminum indicator

Optimized aluminum indicator

Large and well-arranged scale with a 90° angle for optimal reading.

Rounded edges and rims ensure a smooth draining of liquids after wet contact. A special anodization and paint finish make the indicator housing suitable for outdoor use.

Process connection: wafer style

Stainless steel indicator

Stainless steel indicator

IP65, IP66, IP67 protection for extreme applications

Large and well-arranged scale with 90° angle for optimal reading.

The round design ensures a smooth draining of liquids after wet contact. Salty and rough environments e.g. off-shore applications do not show any problem.

High-temperature version with displaced indicator

Displaced indicator for process temperatures up to 300 °C

For very high or very low process temperatures the indicator will be displaced 100 mm from the measuring pipe.

The use of limit switches or transmitters is without limitations.

Special materials

PTFE lining for highest chemical resistance

Wetted parts made of Hastelloy

The unique design enables the usage of chemically highly resistant materials for rough industrial environments and highly corrosive processes such as e.g. acid and lye.

Technical Data

Armature

Materials:

- 1.4404 (316 L) / 1.4571 (316 Ti)
- From DN150 Steel / Stainless steel
- Hastelloy C 22
- PTFE

Special material on request.

Process-connection:

Wafer for flanges acc. to

- DIN EN 1092-1
- ASME B16.5
- DIN 2512

Special fittings according to customer requirements.

Nominal pressure:

- PN 40, ASME CI150 / 300 (Standard) (TSK-S/H)
- PN 16, ASME CI150 (Standard) (TSK-P)

Higher pressures on request.

Process temperature:

- -40°C ... + 200°C / max. 300°C with forward advanced indication part (TSK-S/H)
- -20°C ... + 125°C (TSK-P)

Environmental temperature:

- -40°C ... + 80°C without electrical accessories
- -25°C ... +70°C / +80°C with limit switches
- -40°C ... + 70°C with ES transmitter

Measurement deviation:

- $\pm 2,5\%$ of the full scale (Liquid/Gas)
- $\pm 0,2\%$ additional error with a converter (ES)

Repeatability:

- $\pm 0,5\%$

Display Part

Protection class:

- Aluminum IP65
- Stainless steel IP65, IP66, IP67

Electrical Outputs

Switch outputs:

- max. 2 inductive switch contacts (SJ 3,5 N)
 Refer to type approval for elec. parameters
- max. 2 inductive switching contacts (SJ 3,5 SN) (safety design)
 Refer to type approval for elec. parameters
- max. 2 micro changeover switches
 (Reed switch $U_{max}:175V_{DC}$, $I_{max}:0,25A$, $P_{max}:5W$)

Transmitter ES:

- ES with HART®
- ES with HART® and 2 NAMUR contacts
- ES with HART® and 1 NAMUR-contact / 1 pulse output
- ES with HART® and counter module.
 (only for flow direction from bottom to top)

Power supply transmitter ES:

- 14 ... 30 V_{DC}, 2-wire (reverse polarity protected)

Outputs Transmitter ES:

passive, galvanic isolated

- Analogue: 4...20 mA with HART®
 $U_i=30\text{ V}$, $I_i=150\text{ mA}$, $P_i=1\text{ W}$
- Binary 1 and 2: 2x Contacts
 $U_i=30\text{ V}$, $I_i=20\text{ mA}$, $P_i=100\text{ mW}$
- FF:
 $U_i = 17,5\text{ V}_{DC}$ (FISCO), or
 $U_i=32\text{ V}_{DC}$, $I_i=280\text{ mA}$, $P_i=2\text{ W}$
- Counter Module (non Ex):
 - Power Supply:
 $U_{max}=30\text{ V}_{DC}$, $I_{max}\leq 10\text{ mA}$
 - Binary input: Reset counter reading
 $U_{max}=30\text{ V}_{DC}$
 - NPN Outputs
 $U_{max}=30\text{ V}_{DC}$, $I_{max}=20\text{ mA}$

Protection class transmitter ES:

- IP20 (EN60529)

ATEX and IECEx:

Refer to Certificates and Approvals

For electrical parameters refer to certificates

Measuring ranges
