

Variable Area Flow Meter

For horizontal and vertical installation

BGF

Technical Information

- Extreme robustness due to guide stars instead of rod guides
- Suitable for all flow directions
- Flow measurement of liquids and gases
- Outstandingly clear reading due to 90° arranged scale
- Electrical transmitter with HART®, PROFIBUS-PA® or Fieldbus Foundation®
- Suitability for installation in safety-related measuring systems according to SIL

For all flow directions

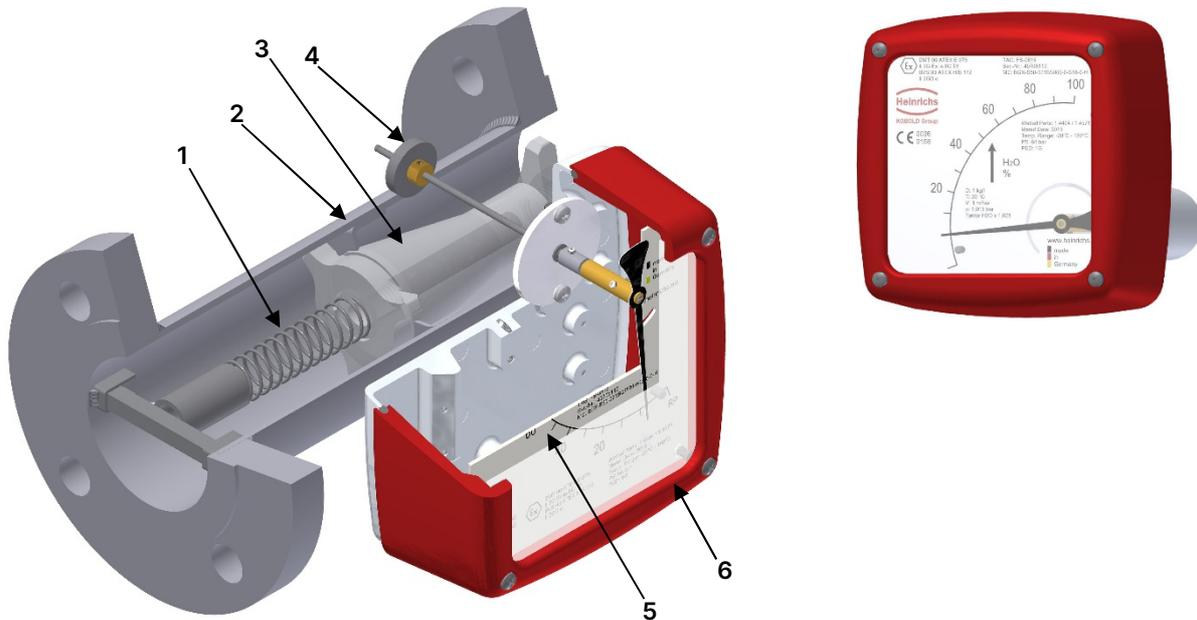

Function

The measuring element consists of a sharp-edged measuring ring (2) and a conical measuring body (3) with a compression spring (1).

If a medium flow through the measuring ring (2) with sufficient flow velocity, the measuring body position shifts until a state of equilibrium is reached between the applied flow force and the measuring body plus spring force.

The position of the measuring body (3) in the measuring ring (2) serves as a measure of the flow rate and is converted into a rotary movement by the permanent magnet encapsulated in the measuring body (3) via a magnetic sequence system (4). This rotary movement is transmitted to the scale (5) and, if required, to the additional electrical equipment (e.g. electrical transmitter, contacts) in the display housing (6).

Application

The BGF instrument is suitable for flow measurement of liquid or gaseous fluids in a pipe.

Indicated will be the actual flow in volume or mass per time.

Applications:

- Flow measurement
- Monitoring
- Adjusting
- Control of liquid and gaseous products

The meter design makes it ideal for processes under difficult and rough operating conditions.

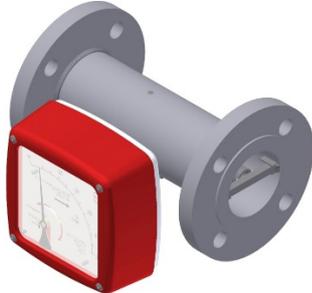

The devices are available with additional electrical equipment for process monitoring and control.

Features:

- Permanent magnetic signal transmission
- Applicable for high-pressure applications and high-temperature processes
- Excellent heat tracing technology (option)
- Double eddy current damping (option)

Design / Variation

Aluminum indicator

Optimized aluminium display

Large and well-arranged scale 90° angle for best reading.

Rounded edges and rims ensure a smooth draining of liquids after wet contact. A special anodization and paint finish make the indicator housing also suitable for outdoor use.

Process connections: flange, thread, clamp, weld ends

Stainless steel indicator

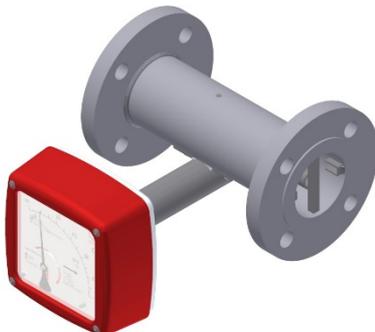

Stainless steel indicator

Large and well-arranged scale with 90° angle for optimal reading. IP 47 protection for extreme applications.

The round design ensures a smooth draining of liquids after wet contact. Salty and rough environments such as off-shore applications do not show any problems.

High temperature with displaced indicator

Forward advanced indicator for process temperatures up to 200°C

For very high or very low process temperatures the indicator will be displaced 100 mm from the measuring pipe.

The use of limit switches or transmitters are without limitations.

Linings / special materials

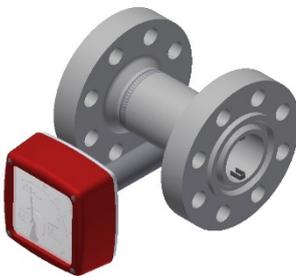

PTFE lining for highest resistance

This lining allows the use in special environments or for highly corrosive processes such as acids and lyes.

Temperature max. 125°C

Max. pressure resistance 16 bar

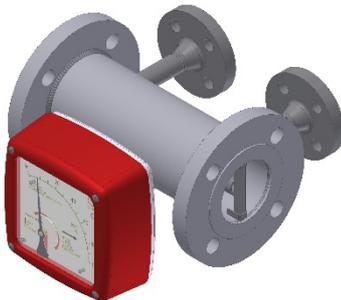

High-pressure version

Due to the unique design of the measuring fitting with cylindrical measuring tube and conical float, the devices can be manufactured with thick-walled measuring tubes without any problems. This allows the use in high-pressure applications for which there are otherwise hardly usable measuring devices.

e.g. high-pressure cooling lubrication systems

Instrument with heating jacket

The cylindrical measuring pipe allows a double-walled construction and the connection of a medium heater, e.g. for steam, hot water or thermal oil, without difficulty.

This enables the use for extremely difficult media or operating conditions.

The connections for the medium heating are made according to customer requirements.

Assembly / Special solutions

We develop solutions for individual measuring tasks in close cooperation with our customers.

We develop and manufacture application-related assemblies according to customer requirements - e.g. with valves, flow regulators, including piping, etc..

Technical Data

Fitting

Materials:

- 1.4404 (316 L) / 1.4571 (316 Ti), spring stainless steel 1.4571
- PTFE, spring Hastelloy HC 4 (2.4610)
Special materials on request

Process connection:

- Flange according to
 - DIN EN 1092-1
 - ASME B16.5-2003
 - JIS, NPT, Tube fitting

Special materials on request

Nominal pressure:

- PN 40, ASME C1150 / 300 (Standard) (BGF-S)
- PN 16, ASME C1150 (Standard) (BGF-P)

Higher pressures on request.

Process temperature:

- -40 C ... + 200°C (BGF-S)
- -40 C ... + 125°C (BGF-P)

Environmental temperature:

- -40°C ... + 80°C without electric accessories
- -25°C ... +70°C / +80°C with limit switches
- -40°C ... + 70°C with ES transmitter

Measurement deviation:

- BGF-S/P
 - Water :± 2% of the measured value
 - Gas : ± 2,2% of the measured value
 - qG 50% acc.to VDI/VDE 3513-2
- ± 0,2% additional error with transmitter ES

Repeatability:

- ± 0,5 %

Display Unit

Protection class:

- Aluminum IP65
- Stainless steel IP47

Electrical outputs

Switching outputs:

- max. 2 inductive switch contacts (SJ 3,5 N)
 - ⊠ Refer to type approval for elec. parameters
- max. 2 inductive switching contacts (SJ 3,5 SN) (safety design)
 - ⊠ Refer to type approval for elec. parameters
- max. 2 micro changeover switches
(Reed switch U_{max} :175V_{DC}, I_{max} :0,25A, P_{max} :5W)

Transmitter ES:

- ES with HART®- Protokoll
- ES with HART®- Protokoll and 2 NAMUR-contacts
- ES with HART®- Protokoll and 1 NAMUR-contact and 1 pulse output
- ES with Profibus-PA®
- ES with HART®-Protocol and counter module (only for flow direction from bottom to top)
- ES with Foundation FIELDBUS®

Power supply transmitter ES:

- 14 ... 30 V_{DC}

Outputs Transmitter ES:

passive, galvanic isolated

- Analogue: 4...20 mA with HART®
 - ⊠ $U_i=30\text{ V}$, $I_i=150\text{ mA}$, $P_i=1\text{ W}$
- Binary 1 and 2: 2x Contacts
 - ⊠ $U_i=30\text{ V}$, $I_i=20\text{ mA}$, $P_i=100\text{ mW}$
- PPA or FF:
 - ⊠ $U_i = 17.5\text{ V}_{DC}$ (FISCO), or $U_i=32\text{ V}_{DC}$, $I_i=280\text{ mA}$, $P_i=2\text{ W}$
- Counter Module (non-Ex):
 - Power Supply: $U_{max}=30\text{ V}_{DC}$, $I_{max}\leq 10\text{ mA}$
 - Binary input: Reset counter reading $U_{max}=30\text{ V}_{DC}$
 - NPN Outputs $U_{max}=30\text{ V}_{DC}$, $I_{max}=20\text{ mA}$

Protection class transmitter ES:

- IP20 (EN60529)
